

Easy to use software for all **planning**, recording, reporting and mapping.

Sophisticated but not complicated

Manager software simplifies operations for the whole farm, across rotations and paddocks, and even within paddocks. Manager takes the guesswork out of **planning** all farm inputs, operations and outputs. And you can assess profitability and risk as you **plan**.

Record keeping is quick, accurate and compliant with most management systems.

No other software makes **planning**, recording and profiting so easy.

As a licensed Manager user, you have unlimited access to Freecall Helpdesk services. Your annual licence includes all Manager enhancements/upgrades and a user guide.

With Manager you can:

- ▶ Quickly prepare whole-farm cropping, livestock and pasture **plans**
- ▶ Use existing maps to make better decisions and create new maps to better **plan**
- ▶ Easily produce 'recipes' of inputs and operations for all paddocks
- ▶ Summarise all inputs for the farm into 'shopping lists'
- ▶ Determine gross margin by crop and by paddock over a range of likely prices and yields
- ▶ Prepare 'what if' scenarios on alternative management strategies
- ▶ Produce detailed reports and budgets including seasonal cash-flow projections
- ▶ Track chemical and fertiliser use
- ▶ Provide clear operational **plans** to farm managers and workers
- ▶ Easily revise **plans** as the season progresses
- ▶ Satisfy quality assurance legal requirements
- ▶ Prepare Water Use Efficiency projections and reports

- ▶ Use the unique Rotation Analyzer to determine a paddock sustainability index
- ▶ Review, analyse and compare what happened to what was **planned**

Easy to use

Manager comes complete with a comprehensive list of crop, variety, fertilizer and chemical inputs used in Australia. New products and price variations can be easily added, edited and refreshed without affecting historical data. In Manager you can configure drop-down lists. Copy, find and replace functions ensure Manager is easy and fast to use.

Precise, practical and profitable

With Manager you can choose and use the latest farming technologies to suit your farming operation. Manager is straightforward software for **planning** and analysing variable rates of inputs within paddocks. You can quickly calculate if variable input rates will be practical and profitable.

Manager makes variable rates of inputs a reality in your paddock.

My paddock planning and record keeping was a mess until I was introduced to Manager by my agronomist. It's a fantastic program and very simple to use. Now everything is organised and my farming operation is much smoother. My advisers, tractor driver and staff all know what is to be done because it is all printed out in booklets. I would be lost now without Manager.

Farmer, Kununoppin, Western Australia

Mapping capabilities

Whole farm **plans** can be viewed as maps in the latest version of Manager. Maps show how inputs, outputs and profits alter within paddocks, between paddocks and between rotations. You can easily see where inputs are required and how input rates and costs vary.

Available in Lite and Reader versions

Manager Lite is for farm managers wanting to **plan**, record and report in tabular form. This is cheap software for those who currently do not use maps or do not require cashflow data.

Information and files created using Manager Lite are compatible with Manager; so you can upgrade at any time.

Reader enables you to view and print reports and maps generated by your adviser or consultant. It does not allow you to alter their data.

Annual licence

Manager is sold as an annual licence so your start-up cost is much cheaper. Regular Manager upgrades, a user guide and free Helpdesk services are included in the annual licence.

The annual licence not only represents Back Paddock's commitment to quality and service but also its long-term obligation to profitable relationships within agriculture.

Compatibility

Manager is compatible with all Back Paddock softwares. You can transfer and share files with your adviser and consultant who prepare your farm **plan** using Back Paddock's Adviser software. Maps and spatial information generated can be easily utilised in Manager.

Manager enables you to use maps created elsewhere because it is compatible with most popular vector and raster mapping formats. Yield maps and biomass images can be viewed and used in your **planning** process.

MANAGER

Profitable farming requires proper planning and recording. Find out what Manager software can do for your business.
